the main machine, and then take out the battery. (As shown Fig 2)

1.4 Connecting network

1). SIM card

Your provider provides Subscriber Identity Module (SIM) card for your phone, contains your phone number, service details, and phonebook/message information. Make sure that you have inserted a valid SIM card before use the phone; otherwise, you cannot use the feature in the SIM card.

Any related information with establishment network connection recorded in card, and record phone name, number and message in the SIM card also. You can insert the SIM card into any GSM phone to use (a new

phone can recognize automatically. In order to prevent loss and damage information of in the card, should avoid touching the metal plane region, Avoid exposing your SIM card to electricity, magnetism. The card damaged once, the user will not be able to enter the network. Warning: Turn off the phone when you take out the SIM card. Forbids absolutely to insert or to take out the card while the phone connected the external power.

2). Insert SIM card

Before remove or insert the SIM card please take out it carefully. Turn off your phone and then remove battery as well as other external power. Slide the SIM card under two lugs with the metal contacts facing downward, push the SIM card so that it clicks into place. If user wants to take out it, please turn the phone off firstly then take out phone's battery and last take out SIM card.

3). Insert the SIM card

In order to prevent random use your phone,

you can use PIN (Personal Identification Number) to protect your SIM card form unauthorized use. Once the PIN is activated, you will be required to enter the PIN code at the time your phone is turned on. You can disarm the protect code, if so, the SIM will be not prevent random use.

Press and hold power/ hang up key to turn on your phone and press the left soft key (or use touch-pen to click the soft key) to confirm. If you enter a wrong PIN code three times, the SIM card will be locked, and need input PUK code.

Pay special attention to: there is a stander PIN cord (4 to 8 digits) of your SIM card is pre-configured and communicated to you by your network provider. You can personalize the PIN code.

4) Network Connection

If a right code is entered your phone will start searching for the Network Settings.

5) Switch on/ off

Press and hold power/hang up key to switch

on/off the phone. If the PIN is activated, when you switch on the phone, you may be prompted to enter the PIN code.

a. Input the PIN code

You can use PIN to protect your SIM card from unauthorized use. Once the PIN is activated, you will be required to enter the PIN code at the time your phone is turned on.

For the sake of confidentiality, the code is displayed as a group of "*" in the screen.

Press the left soft key (or to click the soft key with touch-pen) to confirm, after a short time, if a right code is entered your phone will start searching for the Network Settings. Once the network name is shown on the screen, you can dial or answer a call. If no network name is shown on the screen, need you to register again.

If you make a wrong input, you can press CLR to delete the wrong numbers. If you enter a wrong PIN code three times, the SIM card will be locked and asked you input PUK

code. If so, please contacting your SIM card supplier.

6) Dial call

When the sign of the Network provider is displayed screen, your phone enter idle display to dial and answer call.

In quick feature display from the left first icon is signal intensity. All mobile phones may be obstruction subject to interference, which could affect the performance of the mobile phone. So moving within small range can advance the signal strength.

Make a call in idle mode have dual mode such as: direct dialing, call from the phonebook, call from call list, call form SMS and MMS, speed dial, call from SIM card. (if you have set PIN code must input right secret code to dial a call)

In any country where the digital GSM network is used, you can make emergency calls when your mobile phone in the coverage network area (you can get it by means of inspecting the network signal

indicator on the left top corner of the screen.)
and you can make emergency calls without
SIM card.

112 is the standard GSM emergency
number, which can be used by any GSM
network in the world.

Call

2.1 Dial call

When your service provider's icon display the screen, to wit enter idle mode and you can make or answer a call. The signal indicator in the top left corners of the screen Indicates strength of signal being received. There are 4 bars is the most signal indicator. All mobile phones may be obstruction subject to interference, which could affect the performance of the mobile phone. So moving within small range can advance the signal strength.

1.6 Security Set

1.6.1 PIN Check

When the PIN is off, the first option in the screen will be "start PIN check", and when it on, the first option will be "turn off the PIN

Check".

After the SIM card is installed correctly, press the left soft key [or click with touch-pen] to choose "Turn on PIN Check" or "Turn off PIN Check", then the user needs to type in the correct PIN to turn on or off the PIN Check; but there are only three chances to check. If a wrong PIN is input three times, the SIM card will be locked, and the PUK will be needed. In this case, please contact the SIM card provider.

If no SIM card, a hint will inform that "please check the SIM card!"

If the PIN Check is already turned on, the hint will note you to input the PIN.

1.6.2 Change PIN

After the SIM card is correctly installed and the PIN check is turned on, press the left soft key [or click with touch-pen] to choose "Change PIN". Then the user has to input the old correct PIN, then the new PIN twice which must contain 4 to 8 numbers. If a wrong PIN is input three times, SIM card will

be locked.

1.6.3 Change PIN2

It's similar to Change PIN, and please refer to Change PIN.

1.6.4 Fire Wall

After the SIM is changed, all settings in Fire Wall will be saved.

1.6.4.1 SMS Fire Wall

“Spam Activating”: all SMS from the numbers on the SMS Spam List will be directly thrown into the trash. But when the SMS Spam List is empty, it's not allowed to enable “Spam Activating”.

“Mobile phone Only”: all SMS from the numbers without the beginning as (+86) 13, will be directly thrown into the trash.

“Off”: Turn off the SMS Fire Wall.

1.6.4.1.2 SMS Spam List

If the user put a mobile phone number in the SMS Spam List, then all SMS from this number will be directly thrown into the Trash. Either input or choose from the “Phone list” the numbers to add to the Spam List. If you

want to delete a spam number, you need to choose the “Delete Option” in the menu.

1.6.4.2 Phone Fire Wall

1.6.4.2.1 Fire Wall Settings

“Black List On”: the numbers in the Black List cannot call in. when the black list is empty, it's not allowed to turn on the Black List.

“White List On”: Only the numbers in the white list can call in. when the white list is empty, it's not allowed to turn on the white list.

“Off”: to turn off the Fire Wall and any number can call in.

1.6.4.2.2 The Black List

When entering the black list, the menu in the soft key area offer three options: “Phonebook”, “Manual Input” and “Delete”.

The user can either choose from the phonebook or manually input numbers into the black list; if the user wants to delete some numbers, he just needs to press “Delete” to remove the chosen numbers.

1.6.4.2.3 the White List

When entering the white list, the menu in the soft key area offers three options: "Phonebook", "Manual Input" and "Delete".

The user can either choose from the phonebook or manually input numbers into the white list; if the user wants to delete some numbers, he just needs to press, "Delete" to remove the chosen numbers.

1.6.4.3 Security Fire Wall

1.6.4.3.1 Fire Wall Settings

You have to manually input the mobile phone password to set the password to the application. The applications that can be given passwords include "phonebook" 'SMS' "Color SMS" "Email" "Call Records" and "turning-on password ". The application password is the mobile phone password.

1.6.4.3.2 Change Password

To change the password, you need to input the old password correctly (initial value:0000), then you can be allowed to input the new password. The new password

is to be input twice to become valid.

1.6.5 Reset

When you choose "Reset", you first need to input the right reset password, then the security firewall password (mobile phone password) will become "0000", and also all the settings in the security firewall will be turned off.

1.6.6 U-disk Clean Up

When you choose "U-disk Clean Up", you will then see "this operation will delete all the files in the user's data, please make a copy first. Continue?" If you choose OK [or click with touch-pen], the U-disk Clean Up will start. Press the key of right to move the cursor onto the button "Delete", then press OK [or click "Cancel" with touch-pen] to turn off the message frame. The user should finish the copy (copy all the contents in the user's data to a PC). You can't cancel when the copying is going on. After finishing, there will be a sign to indicate whether the cleaning up is a success or not.

Note in particular:

1. U-disk Cleaning Up will format (empty) "the user's data", so make copies before cleaning up(copy all the files in the user's data to a PC). You are suggested to carefully use this function.
2. The format of the mobile phone on a pc, or a long time use of the mobile phone as a memorizer, will both affect the quality of camera. After the U-disk cleaning up, the quality of camera can recover. If the user finds an evident decline in the camera's quality, just use this tool to improve it.

1.7 Time

The screen shows two time zones, and the user can set the time and date, and also check the time and date throughout the world. This feature allows the user to get the accurate time when traveling around the world. When the user is going to travel abroad, he can get the time of the destination and at home as well.

Hour----input the number of hour of the time

the mobile phone shows; the legal scope is between 0-23.

Minute--- input the number of minute of the time the mobile phone shows; the legal scope is between 0-59.

Second---- input the number of minute of the time the mobile phone shows; the legal scope is between 0-59.

Year---- input the number of year of the date the mobile phone shows; the legal scope is between 1970-2035.

Month---- input the number of month of the date the mobile phone shows; the legal scope is between 1-12.

Day---- input the number of day of the date the mobile phone shows; the legal scope is between 0-31.

Time zones----press "OK" to pull down the frame, then use the up-and-down key to choose [or click with touch-pen the time zone] to choose a time zone.

Notes: Only if you press the left sot key [or click with touch-pen to press "Save"] to save

your settings. Other ways such as cutting off the power, pushing the hanging up key and home key won't save it.

1.8 Profiles

Profiles are a group of definitions of the mobile phone's ring-music, and it is easy to turn on. The mobile phone offers a set of modes, including: "normal mode" "outdoor mode" "meeting mode" and "silent mode". For each mode, this is a set of value. The user can change and save the mode as he likes.

Meanwhile, the user can rename the mode as he or she likes.

1.8.1 Turn on the Mode

When having chosen the appropriate mode, choose "Save" key in the menu of the soft key area, now the mobile phone' ring music is set by the chosen mode.

"Profiles" has four defaults: "normal mode" "outdoor mode" "meeting mode" and "silent mode", and it also has four kinds of rings which include "Consecutive R" "Ring

Once" and "Step By Step".

Use the up-and-down button [or click with touch-pen] to choose the Mode and Ring, then press OK [or click with touch-pen] to conform, then choose "Save" in the menu of the soft key to start your mode.

[The operations above can all be conducted by using the touch pen]

1.8.2 Editing the Mode

The user can choose "Edit" in the menu to set the parameters under different modes.

1. Call: press up-and-down button [or click with the touch-pen] to choose "ring of call", then press OK [or click with touch-pen] to enter the editing screen of the ring type of call. Press up-and-down button [or click with the touch-pen] to choose "ring volume", "way of call" and "music"; use the left-and-right button [or click with touch-pen] to adjust and set the right ring volume; "Ways of Call" consists "Ring" "Vibrate" and "Glint"; if you choose all of them, then they

will work together; As the "Glint" is on, the glint lights including blue, red and purple will be shining. The default value of "Glint" is "on" in all four modes. Choose "music" and then press OK [or click with touch-pen] to enter the ring music list. After choosing a song or music, press left soft key [click with the touch-pen] to save the setting, or press the button on the right side to cancel this setting and return to the up menu.

2. SMS: its way of editing is quite similar to that of "Ring Style of Call" with only one difference: the SMS has no "Glint" option.

3. MMS: its way of editing is quite similar to that of "Ring Style of Call" with only one difference: the SMS has no "Glint" option.

4. Alarm: its way of editing is quite similar to that of "Ring Style of Call" with only one difference: the SMS has no "Glint" option.

5. Power On: press up-and-down button [or click with touch-pen] to choose "the ring of power-on", then press OK[or click with touch-pen] to conform "the ring of power-on"

and to choose whether to turn it on or off.

6. Turn Off: press up-and-down button [or click with touch-pen] to choose "the ring of power-off", then press OK [or click with touch-pen] to conform "the ring of power-off" and to choose whether to turn it on or off.

7. Calendar: press up-and-down button [or click with touch-pen] to choose "Calendar", then press OK[or click with touch-pen] to conform "Calendar" and to choose whether to turn it on or off.

8. Key Tone: press up-and-down button [or click with touch-pen] to choose "Key Tone", then press OK[or click with touch-pen] to conform "Key Tone" and to choose whether to turn it on or off.

9. Connected: press up-and-down button [or click with touch-pen] to choose "Connected", then press OK[or click with touch-pen] to conform "Connected" and to choose whether to turn it on or off.

10. Low Battery: press up-and-down button [or click with touch-pen] to choose

“Low Battery”, then press OK [or click with touch-pen] to conform “Low Battery” and to choose whether to turn it on or off.

11. Touch pad Tone: press up-and-down button [or click with touch-pen] to choose “Touch pad Tone”, then press OK [or click with touch-pen] to conform “Touch pad Tone” and to choose whether to turn it on or off.

12. Key Volume: press up-and-down button [or click with touch-pen] to choose “Key Volume”, then press OK [or click with touch-pen] to conform “Key Volume” and to adjust and choose the right volume.

1.9 Network

Examine and adjust the settings of network

1.9.1 Dial-Up Type

“Delete Preferred Network”: in the screen of the preferred network, you choose “Delete” in the menu to enter the deleting screen, then you can choose some to delete.

(Operations above can also be practiced by using touch pen)

2.Communication Menu Application

2.1Call List

In Call List, you can find the missed calls, outgoing calls and incoming calls with their exact call time, date and the length of call time. The Call List has other functions such as recording the calling, saving numbers and deleting records, ect. They can be divided into three classes: “Missed”, “dialed” and “Answered”. Each can save as many as 20 pieces of records. When the room for records is full, the new ones will be

saved and those old ones deleted.

When the mobile phone is on but the password of “Security FireWall” and “Call Record” in the Security Settings is off, press the calling key to see the latest outgoing calls, (if the password of “Security FireWall” and “Call Record” in the Security Settings is on, then the password is needed to check the call records).

When the mobile phone is on but the password of “Security FireWall” and “Call Record” in the Security Settings is off, press the up key to see the missed calls in the “call record”, (if the password of “Security FireWall” and “Call Record” in the Security Settings is on, then the password is needed to check the call records).

Press the left key to enter the main menu screen, and choose “call record” application, then press OK to enter it. There are three types of contents in “Call Record”: missed calls, outgoing calls and incoming calls.

Users can check the names, numbers, the

time of calls, the dates of calls and the lengths of calls, of the recent missed calls(without the call times), outgoing calls and incoming calls.

2.1.1 Recent Calls

2.1.1.1 Missed calls

In the call list, the missed call is defaulted. Entering the Missed Call, you can choose from the menu of the left soft key the functions to operate the missed calls, such as "call", "save", "IP call", "send message", "set black", "set white", "call time" and "delete".

You can press OK[or double click the option with the touch-open] to check the details of the chosen call records, including the names of the callers (if the phonebook has the number), the number of the call, the call time and the date of the call.

"Call": to dial the chosen number;

"Save": to the number into the phonebook;

"IP Call": to dial the IP number plus chosen number;

"Send SMS": to send short messages to the chosen numbers.

"Set Black": to put the chosen number into the black list;

"Set White": to put the chosen number into the white list;

"Call Time": to check the call time, the total time of the outgoing calls and incoming calls;

"Delete"; to delete the useless records.

2.1.1.2 Outgoing Calls

Operations similar to those of Missed Calls

2.1.1.3 Incoming Calls

Operations similar to those of Missed Calls

2.1.2 Delete Records

In the call records, choose the button "Delete" in the menu, then press the up-and-down button [or click with touch-pen] to delete what you want to delete. Then press OK to choose the record, press left soft key [or click "Delete" with touch-pen], the mobile phone will give a hint, then press the OK [or click "Conform" with touch pen] to

conform; press the button of right to move the cursor onto "Cancel" then press OK[or click "Cancel" with touch-pen] to cancel the operation.

If you want to delete a certain piece of record, you can move the cursor on this record and then choose "Delete" in the menu. Press OK to delete this record.

2.1.3 Call Time

In the Call Record, choose the "call time" in the menu, enter the call time screen. Here, you can see the call time of last call, the total time of outgoing and incoming calls.

You can press left soft key [or click "Return to Zero"] to reset the call time as zero, then press the right soft key [or click "Return" with touch pen] to exit call time.

2.2 Phonebook

The functions of Phonebook include "New", "Call", "IP Call", "Send SMS", "Send Color SMS", "Search", "Group Setting", "Status", "Copy", "Delete Record" and "IP Setting".

In the "phonebook" of this mobile phone, all

the records can be grouped, for instance, friends, schoolmates, SIM and so on. And they can also be personally grouped. SIM is very special, because its record can only consist of one phone number. Its capacity is determined by itself. The other records grouped can matched with big-head-photo, several numbers, birthday, email address, the address of the company and gender, ect.

2.2.1 The introduction to the screen

1. Choosing the groups of records on the main screen of phonebook, then you can see all the records in each group.

2. Clicking with the touch-pen the letters on the right side of the screen will let the users find the records, and it works as well as pressing keys,

2.2.2 Update the records

Users can choose "New" in the menu of the soft key, or use the touch-pen to click the "New" key in the up right part, to enter the grouping screen of "New with the big-head photo as the default picture.

Users can change their big-head photos as their wish and do not forget to conform.

Users can change and update the record group according to their own demands. To do that, you just need to move the cursor on the "Grouping Options", then press OK [or click with touch pen] to choose the appropriate grouping, then press the left soft key [or click "save" with touch-pen] and it's finished. If "SIM Card" is chosen, only one number can be input and no big-head photo.

In the "New" screen, the number editing frame can only be input into numbers while the other frames can be input characters, special signs and so on. But, there is a limit to size of every editing frame, for example, the number editing frame can at most hold 30 numbers.

No matter whether to alter or to open a new record, the user need to press the left key [or click with touch pen] to save it after input. If the user press "Cancel" directly, the contents won't be saved.

2.2.3 Alter records

First choose the record then enter the screen of altering. After altering, the user must press the left soft key [or click with touch-pen] to save, then can the contents be saved. If the user chooses directly "Cancel", the altered record will not be saved.

2.2.4 Look up the record

After entering the phonebook, choose "look up" of the menu, you will find the different types as followings:

1. By the initial letter

When the name the users has input are Chinese characters, the user need only to input the initial letter of the character. If the name is English, input the English letter with the initial letter first and with intervals of non-English-letter signs to look up. If the name is a mixture of characters and English letters, use the first one as the criteria. If the first one the user inputs is a special sign, then there will be no result by means of

looking up through initial letter.

Here is an example:

If the name is “欧阳春雪”, the user should input “o” to look up; and inputting o and y is also ok, so is inputting O,C,Y or O,Y,C,X. IF no letter o, or only O,C, or only O,X, no result can be found.

When the name is “Jack Smith”, inputting J or J and S will lead to the name; if only inputting S, no result.

When the name is “Jack Smith”, inputting J or J and S will lead to the name; if only inputting S, no result.

When the user input “Jack 欧 Smith”, inputting J or J and S can be ok, ,if only inputting S ,no result.

When the user input “ 欧 Jack 阳”
Inputting O or inputting O and Y can be ok.
But if only Y, no result

When the name is “%欧阳”, in this case, this initial way won't work.

2.look up by group

Move the cursor onto the “group” of the looking up screen, and then press OK to open the grouping menu, then use the up-and-down to search the grouping you want, press Ok and add the grouping to the grouping place, then choose “look up”, the screen will show all the records you want.

3.Field Look Up

Fields include: telephone number, name, sex, birthday, company, tax number, operation, fax, email, address and remark. The default field is telephone number.

After choosing the field, input the corresponding contents, to look up by the key words can find the records relevant. Besides, if the name is chosen, the content editing frame will show “Male” “Female” for the users to choose.

Note: three ways of looking up are actually the same kind.

2.2.5 Manage By grouping

Choose “Manage by grouping” in the phonebook and enter the screen of

management by grouping. Management by grouping refers to set up different kinds of records and incoming call rings and "phonebook". Another function of management by grouping is to add grouping; the user can define 16 groups.

1. Alter grouping ring styles

In altering grouping ring styles, you first need to choose the groups you are going to alter, then move the cursor onto "grouping ring styles". Then press OK [or click with touch-pen] and enter "ring style" screen. The user can choose the ring as his wish. Another special ring is "default ring" option. If the user chooses "default ring", the incoming calls will correspond with the rings in the sound settings.

2. Altering Grouping Icon

In altering the grouping icons, you just need to open what you choose (the way of opening is the same as altering grouping ring styles), then move the cursor onto the grouping icon, then press OK[or click with

the touch-open] to enter the screen of grouping icon. If the user wants to choose an icon, he just need to move the cursor to the icon, then press OK [or click with the touch-open].

3. Adding grouping

Choose "grouping management" in the phonebook screen, then press the left soft key[or click with the touch-pen] to enter the adding grouping screen. Then you need to input the name of grouping in the "grouping name" editing frame, then choose grouping rings and grouping icon. If you want to edit the added grouping, you just need to choose "Edit" to enter "delete" in the hint menu to delete the added grouping.

Note: if you have deleted the added grouping, the records of this grouping will return to its default value.

2.2.6Call the Present Record

Method1: choose a record with a number, and then enter the calling screen to start calling the chosen number. If the

number is a mobile phone's number, the big-head photo, name, number will appear; if the number is a SIM record number, only appear name and number.

Method2: choose a record with a number, press OK [or click with touch-pen] to enter the browsing screen, then enter calling screen to call the chosen numbers.

When you choose IP call, you call the IP number and your chosen number together; you have to set an IP number before call it. You can find 'IP set' in the main menu.

2.2.7 Send a Record to SMS

Method1: choose a recorded number, then choose "send SMS" in the menu to enter the SMS editing screen.

Method2: choose a recorded number, press OK [or click with touch pen] to enter the browsing screen, then choose "send SMS" to enter the SMS editing screen.

2.2.8 Send a record to email

Choose a record with an email address, press OK [or click with touch-pen] to enter the present browsing screen, then choose "send the email" to enter the email editing screen.

2.2.9 Send a recorded number color to SMS.

Method1: choose a record with a number, then choose "send color SMS ", to enter email editing screen.

Method2: choose a record with a number, then press OK [or click with touch pen] to enter the browsing screen, to enter email-editing screen.

2.2.10 Copy records

Choose "copy to card" or "copy to mobile phone" to enter the copying screen. The specific ways as follows:

Method1: in the browsing screen, choose "copy to card" or "copy to mobile phone" then to enter the copying screen.

Method2: in the browsing screen, choose "copy to card" or "copy to mobile phone"

then to enter the copying screen.

Note: the records in the mobile phone can only be copied into SIM card; records in SIMcard can only be copied into mobile phone.

2.2.11 Deleting Records

You can use the grouping deleting way to delete records. You just need to choose the records, and then choose "delete" in the menu to enter the deleting screen. The specific ways as follows:

Method1: in the browsing screen, choose "delete".

Method2: choose "delete " in the main menu, then choose the records, then press the left key [or click with touch-pen] to delete.

Method3: click the "delete" key in the right up part. You just need to move the cursor onto the records, and then click the key with touch-pen to delete.

Warning: if you change a mobile phone number into a SIM card, and then change

this record to Mobil phone number, some files will be lost. Because the mobile phone record can save a lot of information, and you must be careful!

2.3 the e-mail

2.3.1 the setting of the account

1. You can use the account key in the menu of the soft key to enter the account list screen (the list is empty when you first enter)

4. Choose the background colour

You can choose different colours to be the background colour.

5. Choose the font colour

You can change the font colours.

6. Set up auto-rolling

You can set a screen rolling speed between 0-9999 mini-second

7. Set up auto-screen turning

You can set a screen turning speed between 0-99 seconds

Notice: The items in 'character set' and 'font size' can be set as default. All the electronic books are presented with the default values after such a setting.

4.4 Writing board

4.4.1 New writing board

Choose 'new' in the 'menu' of the soft key tip zone to establish a new writing board. You can choose 'save' in the 'menu' of the soft key tip zone to save. Also, you can choose 'send as a message' or 'send as an email' in the 'menu' of the soft key tip zone to send the board you completed.

4.4.2 Search

Choose 'search' in the menu of the soft key tip zone. Input the search content and press the left soft key (or click 'search' with the touching pen) to search for the writing board you want to find.

4.4.3 Deletion

Choose the 'deletion' in the menu of the soft key tip zone to enter the 'deletion' window. Choose the writing board you want to delete, press the left soft key (or click 'deletion' with the touching pen), there will be a tip window for confirmation. Press 'ok' (or click 'yes' with the touching pen) to delete the writing board.

4.4.4 Files management

You can open and browse other files under other folders through 'user's information'

4.5 Alarm clock

At the alarm clock window, there are two sorts of alarm clocks; 3 repeating clocks and two one-off clocks.

4.5.1 Repeating alarm clocks

Press up and down direction keys(or click with the touching pen) to choose the alarm clock to be edited and then press 'ok' key (or click twice with the touching pen) to enter the editing window.

1. Time: 24 hours, press number keys (or click with the touching pen) to input alarm clock time. E.g. if you press 0630, the alarm clock will ring at 6:30 am. If you press 1800, the alarm clock will ring at 6:00 pm.
2. Open: Press 'ok' key (or click with the touching pen.) to choose 'open' item to choose open or close the alarm clock.
3. Everyday ring: Press 'ok' key (or click with the touching pen.) to choose 'everyday ring'

item, then the alarm clock will ring every day.
4. Week ring: Press 'ok' key (or click with the touching pen.) to choose 'week ring' item, a selection list from Monday to Sunday will be opened. You can press up and down direction key (or click with the touching pen.) to decide how many times the alarm clock rings every week.

4.5.2 One-off alarm clocks

Press up and down direction keys(or click with the touching pen) to choose the alarm clock to be edited and then press 'ok' key (or click twice with the touching pen) to enter the editing window.

1. Time: 24 hours, press number keys(or click with the touching pen) to input alarm clock time. E.g. if you press 0630, the alarm clock will ring at 6:30 am. If you press 1800, the alarm clock will ring at 6:00 pm.
2. Open: Press 'ok' key (or click with the touching pen.) to choose 'open' item to choose open or close the alarm clock.
3. Week selection: There will be single

selection list from Monday to Sunday, press up and down direction key(or click with the touching pen) to choose the date for the alarm clock (single selection only). E.g. If you choose 14:00, open, Friday, then the alarm clock will ring at 2:00 pm on Friday. The clock set will be cleared after the ringing and will not ring again.

4.5.3 Off Alarm clock

Choose the 'off alarm clock'item, then set up the alarm time at 'repeating clock' and 'one-off clock'item. Then, press the left soft key (click 'save'at the soft key tip zone with the touching pen). After the saving, the clock will ring at the pre-set time even though the mobile is turned off. If you don't choose this item, the clock will not ring if the mobile is turned off at the preset time.

4.6 Calculator

The calculator has all the basic calculating function: addition, subtraction, multiplication, division, MC, MR, M+.

Manipulation: Press the number key(or click

the 'number'keys on the screen) to input number, press up, down, left and right key (or click the 'calculating'key with the touching pen) to calculate. Press OK key (or click the 'equalizer'key with the touching pen) to get the result. Press CLR key(or click 'back'key on the screen with the touching pen) to delete input numbers. Press the left soft key (or click the 'clear'at the soft key tip zone) to clear the results or residues.

Notice: the calculating span of the calculator is between $10^{-300} \sim 10^{160}$.

4.7 Dictionary

1. Press the left soft key (or click the 'Chinese to English/ English to Chinese') to switch between English- Chinese Dictionary and Chinese- English Dictionary.

2. In English- Chinese Dictionary (Chinese- English Dictionary) window, input the letters or characters in the editing frame, then the corresponding translations will be listed. Press the 'previous' ('next') key with the

touching pen to see the previous (next) word's translation. Press CLR key (or click 'back' key with the touching pen) to delete the input words or characters.

3. Press the right soft key (or click 'quit' with the touching pen) to quit the dictionary.

4.8 Data synchronization

Through this function, the synchronization between the data in the Microsoft Outlook 2000 in PC and the data in the phonebook of the mobile can be achieved.

4.8.1 Preparation for synchronization

1. The Windows 2000 and XP system are required. Also, the Outlook 2000 of Microsoft Office and the mFone Sync program of the CD-ROM of the phone should be setup.

2. Connect the mobile and the PC appropriately with USB wire.

4.8.2 Synchronization process

The dialogue frame 'for the USB drive?' will be opened after the USB wire is connected to the mobile. Choose 'no' to enter the mobile data synchronization window and

then press the left soft key (or click 'start' at the soft key tip zone). After the initialization of the mobile, open the mFone Sync program installed in the PC and press start. There will be a progress span under the synchronization span. After the synchronization, restart the mobile to finish the data synchronization.

Notice: 1. To ensure the correctness, please ensure that the time in PC is in coincidence with the time of the mobile.

2. If unexpected situations occur during the synchronization, please turn off the mFone Sync program, quit the data synchronization of the mobile and then restart the process mentioned above.

4.9 Service telephone

'Service telephone' provides you with all the domestic service center phone number of Qingdao Hai'er Communication Ltd all over China. You can dial the numbers searching for help.

5.1 JAVA

You can download and update the program written by j2me software from web-sites through the java function of the mobile so that the expansion of potential functions of the mobile can be ensured. Also, there are several default java programs for you to use.

5.1.2 Program Deletion

Choose 'deletion' of 'menu' in the tip zone to delete the installed program. There will be tip window for confirmation. You can only click 'yes' to confirm the deletion and the 'ok' key cannot work.

5.1.3 Management Program

Choose 'management' of 'menu' in the tip zone to enter the program management window, including the permission setting for the program downloading and updating. The followings are the details for 'updating' and 'permission'.

5.1.4 Program updating

You can choose 'update' in 'menu' to

check if there are any differences between the program downloaded in the mobile and the same program provided by web sites. If the program of web sites has been updated, there will be tip informing you of updating. If not, there will also be a tip telling you that the program in your mobile is the latest.

The updating of the programs can be achieved in two forms: 1. You can choose the 'updating' in 'menu' to update directly. 2. You can choose 'management' of 'menu' and then choose the 'update' of 'menu' to update the program.

5.1.5 The permission setting for downloading

You need different permission settings to download programs from different web-sites and you can have such settings through 'permission'.

There are two approaches to enter the permission setting: 1. You can choose 'permission' from 'menu' of the soft key tip zone directly to set permissions. 2. You can

choose 'management' of the 'menu' and then choose 'permission' from 'menu' of the softkey tip zone to set permissions.

5.1.6 Download program

At the JAVA window, you can press the right soft key(or click 'setup' in the soft key tip zone with the touching pen) to enter the program downloading window. You can download the programs only after inputting the correct web-address and connecting the mobile to the internet through dialing.

Notice: 1. The local net support is needed during the downloading process. The user should also inaugurate the corresponding network downloading services.

2. To ensure a stable running of the downloaded java program, please down the qualified JAVA program provide by the legal web-sites.

5.2 JAVA/SD

The function of JAVA/SD is almost the same as that of JAVA. The difference between is that the JAVA programs installed

through the operation of JAVA/SD will be saved to the MMC/SD card. When the JAVA program is to be operated again, the data will be read from MMC/SD.

Notice: If the MMC/SD with installing data is pulled off, the installed JAVA program can not be stimulated through entering the operation of JAVA/SD. If the installation record of JAVA/SD exists, all the JAVA program can be operated after the insertion of different MMC/SD card.

5.3 Game

There are four games in the mobile: Box-pulling, Five pieces chess, Huarong route, Wujiandao. The game rules can be browsed by selecting the 'help'item from the menu. You can quit the games by pressing power/call off key or Home key at any time.

5.3.1 Box-pulling

5.3.1.1 Game rules

There 5 different items on the game window: Wall, Box-puller, Box, Shady zone and bright zone. The task for you is to pull all the boxes

to the shady area. The rules are: you can pull a box forward and you can't pull the boxes against the wall or the boxes against the other boxes.

5.3.1.2 Manipulation

1. Choose 'new game' in the 'menu' of the soft key tip zone to restart the game.
2. Choose 'back' in the 'menu' of the soft key tip zone to cancel the previous step of moving, one click of 'back' can help to cancel one step.
3. Choose 'next mission' in the 'menu' of the soft key tip zone to enter the next mission.
4. Choose 'previous mission' in the 'menu' of the soft key tip zone to return the previous mission.
5. Choose 'selection' in the 'menu' of the soft key tip zone to choose from mission 1 to mission 70.
6. After the game starts, you can click the blank zone with the touching pen, the puller will go to the target zone. Move the puller back of the box you want to move and click

the box, then you can pull the box.

7. There 70 missions in the game. The mission number will be revealed at the upper left top of the game. After each mission, there will be news frame informing you that you will be in the next mission.

5.3.2 Five piece chess

5.3.2.1 Game rules

This is an IQ game, you are going to challenge the computer. Who keep his five pieces in a straight first will be the winner.

5.3.2.2 Manipulation

1. You can place your piece on the chessboard by clicking with the touching pen to start a new game.
2. You can choose 'back' in the menu of the soft key tip zone to take back the previously placed piece. You can keep on clicking 'back' until returning to the default state.
3. If the whole board is filled with pieces without a winner, there will be a news frame telling you that there is a standoff. Then a new game will be automatically started.

4. Choose the 'hint' of the 'menu' of the soft key tip zone to reveal an ideal place for placing a piece. This function will help the beginners a lot.
5. Choose the 'level' of the 'menu' of the soft key tip zone to set your level. You can choose 'beginner', 'medium player' and 'advanced player'.
6. Press the right soft key (or click 'quit' of the soft key tip zone with the touching pen) to quit the game.

5.3.3 Huarong Route

'Huarong Route' is a very ancient Chinese game. It is called one of world's three incredible due to its variable and interesting rules. You can play the game by click different pieces, counting many steps are needed to get out of the route. Also, you can play with your friends, who used the fewest steps to get of the route will be the winner.

5.3.3.2 Manipulation

1. The game window is a chessboard with 20 little squares, standing for Huarong route.

There is an exit about 2 squares wide for Cao Chao to escape. There are 10 pieces of different sizes, representing Cao Chao, Zhang Fei, Zhao Yun, Ma Chao, Huang Zhong, Guanyu and 4 pawns respectively. After you enter the game window, there are only 2 squares unoccupied. Your task is to move the pieces with the touching pen to let Cao Chao to escape from the Huarong Route.

2. Choose the 'back' of the 'menu' can cancel the previous move, you can click back continuously for 16 times.
3. When the game is at the first mission (five passes), you can choose 'the next mission' from the 'menu' of the soft key tip zone to enter the next mission.
4. When the game is at the last mission (no escape), you can choose 'the previous mission' from the 'menu' of the soft key tip zone to return to the previous mission.
5. After the completion of each mission, a news frame will be opened to inform you

that you will enter the next mission.

6. Choose the 'choose mission' from the 'menu' of the soft key tip zone to choose the mission you like. There are 6 missions: 'five passes', 'siege', 'brave heart', 'fledge', 'Not far' and 'no escape'.

7. Choose the 'ranking' from the 'menu' of the soft key tip zone to see the highest score of each mission, that is, the fewest steps needed to get out of Huarong Route.

8 Press the right soft key (or click 'quit' of the soft key tip zone with the touching pen) to quit the game.

5.3.4 Wujiandao

5.3.4.1 Game rules

Wujiandao is an interesting IQ game. There are blocks of different numbers and pictures in each mission. When the blocks with the same picture are moved together, they will be cleared away. You should try to clear all the blocks.

5.3.4.2 Manipulations

1. After entering the game, you should press

the block you choose and drag it to the position you want and then lessen the block.

2. Choose 'back' from the 'menu' of the soft key tip zone to quit the previous step. You can keep on clicking 'back' continuously for 16 times.

3. Choose the 'previous mission'and 'next mission'from the 'menu'of the soft key tip zone to switch missions.

4. Choose the 'choose mission group' from the 'menu' of the soft key tip zone to choose a mission group. Then press the left soft key (or click the 'choose'of the soft key tip zone with the touching pen) to enter the corresponding mission group.

5. Choose 'restart the group' from the 'menu' of the soft key tip zone to clear all the records of the group and restart from the first mission of it.

6. Choose 'restart the mission' from the 'menu' of the soft key tip zone to restart the mission.

7. Choose the 'switch topic' from the 'menu'

of the soft key tip zone to switch topic.

5.3.4.3 Rules for scoring.

After entering the game, the score will be presented to the upper right corner. 1 score for the completion for one mission. On the upper left corner of the screen, the reference steps for passing the present mission will be presented. A completion of the mission will be 5 score. If you use fewer steps to finish the mission, each step you save will be one additional score. On the contrary, if you use more steps, your default score will be taken out (no minus score). The scores will be amounted and the higher the scores, the fewer the steps you used.

Notice: 1. Huarong Route and Wujiandao can only be manipulated with the touching pen.

2. Box-pulling and Five pieces chess can be manipulated either with both keys and the touching pens.

5.4 Input

The board support key input and writing

input

5.4.1. Key input

The mobile provide four input modes: Pinyin, English, 123(number) and strokes. You can set the input mode at the 'mobile sets'. If you have chosen the selections item before the input modes, you can choose input mode to input in the editing frames without inputing content restrictions. E.g. If you choose pinyin and English at the 'mobile sets', then you can use both pinyin and English in the the editing frame without inputing content restrictions.

As for the editing frames without inputing content restrictions, the default input mode is pinyin. However, the frames with restrictions, take the phonebook for example, you can only input number when you want to establish a new record. Thus, the default input mode is 123 for this frame.

You can press * to switch the input mode. When you choose the English mode, you can choose 0 to swith the capitalized

and uncapitalized alphabets. Under the pinyin and the English inputting mode, the number key 1 will be a blank key, that is, if you press number key 1, there will be a blank left on the screen. The cursor will appear by a press on #, and you can move the cursor to locate the character you want by pressing the up and down directions keys. Press OK to confirm the character you choose.

When you use the pinyin mode, the number key 2 to 9 will represent the letters and you can press them to spell the character. During the input, the cursor will be at the pinyin selection item, you can switch the cursor among the pinyins by pressing left and right direction keys. You can press OK to confirm the pinyin you choose and the cursor will turn to the characters to be selected. If you want the cursor to return to the pinyin selection items, press CLR key. Also, you can press CLR key to edit the pinyin letters one by one. You can quit the

input by pressing the right soft key. If the cursor is at the pinyin selection items, you can also quit the input by pressing the left soft key. If the cursor is at the character selection items, a press of the left soft key will add the characters to the editing frame and the input window will be canceled.

As for the stroke mode, the number keys 1 to 5 are marked with strokes. You can input according to the strokes, the input manipulation is the same as the pinyin mode.

As for the English mode, you can press the number keys to type letters. A first press of a number key will type the first letter marked on it.

5.4.2 Writing input

You can move the cursor to the editing frame and click the editing frame with the touching pen to switch to writing input mode. After entering the input mode, the cursor will be defaulted to Chinese if there is no content restriction to the frame. If there is a

restriction to the input content, e.g. the phonebook, the default input mode will be 123. According to the different inputting content, the writing input modes are divided into 'Chinese', 'ABC-abc', '12.', " @# ", " ← " .

When you input the contents, if the content you want is already in the selection item, you can click it with the touching pen to add it to the editing frame.

You can click ← to delete the input content. After the completion of the inputting, you can press the left or right soft key to cancel the input window.

Under the writing mode, you can move the cursor by click the position for a time.

5.5 MMC

You can save files in the convenient MMC card, which can help to expand the saving space of the mobile phone.

1. Insert the MMC card appropriately, after the completion of the loading, there will be a mmc-sd1 catalog under the 'user's

information'. Then you can begin the manipulation to the files in the MMC card.

2. After the loading, click the SD icon on the TOP BAR to enter the list selection window. Then press up and down direction key (or click with the touching pen) to choose and manipulate 'install/ uninstall MMC/SD card' and 'browse MMC/SD card'.

3. During the operation of the 'user's information, press the up and down direction key (or click with the touching pen) to choose 'mmc-sd1' and then press OK key (or click twice 'mmc-sd1) to open 'mmc-sd1'. Then you can operate the files in the MMC card as well as the files under other dialogues.

Warning: Any inappropriate insertaon or pulling of the MMC card may lead to the instability of the system and the eternal damage to the MMC card.

5.6 USB

The USB can help the mobile to connect the PC so that you can manipulate on the local

catalog of the mobile more efficiently.

1. When the mobile is used as a USB drive, the PC can operate the files under the 'user's information' and there will only be an installation folder under the root catalog of the mobile.
2. If the mobile is not used as a USB drive, you can operate the 'user's information' on the mobile and PC can't operate on it.
3. If the file system receives a slight damage, there will be a tip window 'slight damage on the file system, use PC to repair the user's information' when the mobile is used as a USB driver. And you can choose the 'auto repair of the errors' of the 'check' of the 'tool' under the 'property' of the USB drive on the PC. Then, you can press 'start' to repair the system.
4. If there is a severe damage to the system, there will be a tip window 'file system damaged or unrecognizable,

kinescope format the user's information or format it with the PC'. You use the 'kinescope optimize' to format the 'user's information, or choose 'format' of the USB drive to format the 'user's information on the PC. The former approach is recommended.

Warning: Any inappropriate insertion or pulling of the USB may lead to the instability of the system and the eternal damage to the USB.

Trouble Shooting

Problem	Remedy
The display indicates that the phone is locked.	You need PIN code and PUK code to unlock the phone. Contact your service provider.
No signal	You lose connection with your Network Settings. Your location may be a blind area (like in a tunnel or between high-rises) or not covered by the Network Settings. Change your location and try again. Or contact the service center

	for advice.
Slow (or no) keypad response	It is extremely cold. Move to a warmer place and try again.
No standby display	Press the Clear key Turn the phone off and then check if the SIM card and the battery are properly installed. Switch on the phone and try again.
Battery icon flashing during charging without battery level indicating bars	The battery level is extremely low or the ambient temperature is out of the acceptable range (0-4.5 Celsius degree). Move the battery to a warmer place and wait some minutes

	before starting changing.
Flashing backlight and battery icon, prolonged beep and prompt "wrong accessory"	Detach the charger from the phone and replace with a genuine one.
You can not use the phone in a car	A car may contain some metal parts that absorb electromagnetic wave and thus have an adverse effect on phone performance. Purchase a car kit to allow hand-free answer. Consult the local authorities about use of phones while driving.

What is the difference between pressing and holding a number key	Press a number key and the number is displayed. When pressing and holding (one second at least) a number key, you can activate a hotkey (refer to setting up a Hotkey) or a special symbol (e.g. "+" when pressing and hold the [T9+*] key)
--	---

Problem	Remedy
No Date and times	Your phone has a standby battery powered by the main battery. If the main battery is

	removed, a full charged standby battery could stand up to seven hours. Remove the battery before your phone is turned off may lead to loss of information like Date and time too.
No display of Send ID	This feature is Network Settings dependent. Contact your service provider.
Not allowed to use a certain function	Many functions are Network Settings dependent. Contact your service provider.
Failure to send a Messages	Messages feature is not available in all Network Settings. Contact your service provider for details.
You can not	Remove the battery first.

Switch on the phone	Check if the connector is in good condition. Install the battery again and make sure it is in good contact with the phone. Charge the battery to full. Try again.
You can not answer incoming calls	Check if call forward or call barring is activated. If yes, deactivate it.
The screen prompts a SIM card error.	The SIM card may be damaged. Contact your service provider.

Safety and General Information

Exposure to RF Energy

Your phone contains a transmitter and a receiver. When it is ON, it receives and transmits radio frequency (RF) energy. The transmission power of mobile phone can be controlled with the GSM Network Settings.

Your phone is designed to comply with all standards and guidelines regarding exposure of human beings to radio frequency electromagnetic energy and 1999/5/EC on RF equipment and communication terminals

Car

Consult the car manufacturer to ensure that electronic equipment used on your car is adequately shielded from electromagnetic interference.

Blasting Areas

To avoid interfering with blasting operations, turn your phone OFF when in a "blasting area". Obey all signs and instructions.

Potentially explosive atmospheres

It is dangerous to use mobile phone in areas exposed to explosion risks.

- Turn your phone OFF when in any area with a potentially explosive atmosphere, such as gas station, oil tank and chemical plant, etc, and when the air contains metal powder or grains, please Switch off your mobile in those places.
- Consult the local safety regulations first if you are to use your mobile phone on a vehicle loaded with explosives or flammables (even when the ignition is turned off) or on a vehicle powered by LPG.

Efficient Operation

Efficient operation can improve your phone performance, lower RF energy and energy consumption.

- For the sake of safety and optimum performance, hold your phone properly during a call, with the antenna above your shoulder and earpiece close to

your ear.

- Avoid contact with antenna during a call.

Do not use a phone the antenna of which is damaged. Touching a damaged antenna may cause slight burn. Ask a qualified technician or to replace the antenna for you. Use only genuine Haier parts.

Avoid using your phone in areas of a weak signal, such as in tunnels or between high-rises. In these cases, the signal strength icon shows fewer bars than usual. Using non-Haier accessories may void the warranty. Haier is not responsible for damages caused by using non-Haier accessories.

Use only Genuine Haier charging accessories intended for specific phone models. Use of attachment not recommended by Haier may result in dangers and void the warranty.

Battery Use

This phone may be allocated respectively

appointed two batteries by the manufacturer, their capacities are respectively 900mAh and 1450mAh. The particular description is as follows:

1. If the standard battery used on this phone is a Li-ion 900mAh battery, with a standby time of about 120-200 hours and a charging time of about 150-220 minutes.
2. If the Li-ion 1450mAh battery is used on your phone, its standby time is about 200-300 hours; and the charging time is about 240-360 minutes.

Notes: The standby time and the speaking time may vary based on the network condition.

Use of other accessories will void the warranty. The manufacturer of this phone is not responsible for damages caused by using non-original dealer accessories.

- Do not touch the two poles of the battery with metal (e.g. keys in your pocket) to prevent damage and injury resulting from

- battery short circuit.
- Do not fold or disassemble the battery.
- Do not throw the battery in fire or soak it in water.

Responsibility

User's Responsibility

Neglect may cause failure or injury. To avoid that, please read carefully the following safety precautions and keep people using your phone informed of them.

To prevent any unauthorized use of your phone:

- Make sure your phone is put in a safe place and out of reach of children.
- Keep your PIN code in mind; do not write it down on pieces of paper.
- Turn the phone off when it is not used for a long time.

Children

Your cell phone is not a toy. Make sure your phone is put in a safe place and out of reach of children. Do not allow children to play with your phone, it may cause injury or damage.

Compliance with Local Law and Regulation

Cell phones may cause interference. Laws and regulations are passed with respect to this. Please consult local authorities for law information when purchasing a phone. If you are to use your phone when traveling, knowledge of relative laws and regulations in the destination area or country is helpful.

Note: Strict laws and regulations are imposed on use of phone when driving or on board an aircraft.

Do not use your phone when you are in areas or countries without GSM Network Settings.

Use While Driving

It is dangerous to using a mobile phone when driving, because when using a phone, you cannot concentrate solely on driving.

- Give full attention to driving and to the road. If possible, park your car before using your phone,
- Check the laws and regulations on the use of phones in the area where you

- drive. Always obey them.
- Consult the car manufacturer to ensure that electronic equipment used on your car is adequately shielded from electromagnetic interference.
 - You are recommended to use a hand-free car kit specially designed for this purpose. Always give full attention to driving and to the road.
 - The use of front light and horn as alert of incoming calls are prohibited in some countries. Check the laws and regulations on the use of phones in the area where you drive. Always obey them.

Important

Environment protection

Local laws and regulations on disposal and recycle of packaging materials, old batteries and phones should be observed.

Standard symbols are designed for appropriate disposal and recycle.

Battery

: Indicating batteries should not be mixed with domestic waste.

Packaging

- : Indicating that the packaging materials are recyclable.

- : Indicating that the plastic materials are recyclable.

Adequate care and maintenance can ensure you many years of trouble free operation.

Please keep your phone dry and clean.

Care and maintenance

Your mobile is a product of high technology.

- Do not leave the phone in a place of dirt and heavy dust to prevent contamination of detachable parts.
- Do not store/use the phone at an extremely high temperature that may be

harmful to electronic element and battery, or cause distortion or deformation of the plastic parts.

- Do not attempt to repair the phone or its accessories by yourself. You can dial the hot line number of Haier when your phone cannot be operated normally.
- Always purchase and use Haier batteries and chargers.
- Protect the phone from dropping, impact, and violent vibration.
- Keep the phone and its accessories out of reach of children.
- Keep the phone dry. Do not clean the phone with chemical solvent or detergent. Use a cotton cloth with water or neutral soap solution to clean the shell gently.
- Switch off the phone without delay if it becomes wet. Remove the battery and allow it to dry in the air. Inspect and make sure whether the phone functions properly.

Version 3 Aug. 2005
Compliance: Q/02 HTX001-2005
